Research Questions	RQ1: How can we automatically reveal the framing differences in articles presenting the same event?			RQ2: How do news sources with different characteristics change stories over time?	
				[B004: Harris Harris	
	RQ1.1: Which signals of framing can be identified from the comparison of multiple articles?	RQ1.2: How is our method performing?		RQ2.1: How well does the framing analysis relate with the information available on affiliation, newsgroup and bias of the single outlets?	RQ2.2: To what extent can we identify cascades of information using temporal information?
	We can identify quite				We can identify
Hypotheses	a few signals that can only be seen when considering multiple articles. See	We can provide a baseline providing reasonable results		There are some features (e.g., how extreme is the source) that will show a predominance of certain framing techniques	patterns between certain sources that take contents from others and perform
	Text2Story		Pipeline	maning techniques	specific modifications
Evaluation	User study	Cross-article framing dataset collection/annotation		Implementation and data collection (outlet info + framing annotations)	Implementation and data collection
		Baseline creation and evaluation			7
Outputs	Cross-article framing signals	A baseline to identify the signals		Association model between outlets features and framing performed, further indicator of outlet "bias"	Propagation of information model
