Research Questions	RQ1: How can we automatically reveal the framing differences in articles presenting the same event?		RQ2: How do news sources change stories over time?
'	+	-	<del>+ + + + + + + + + + + + + + + + + + + </del>
Subquestions	RQ1.1: Which signals of framing can be identified from the comparison of multiple articles?	RQ1.2: How is our method performing?	RQ2.1: How well does the framing analysis relate with the information available on affiliation, newsgroup and bias of the single outlets?  RQ2.2: To what extent can we identify cascades of information using temporal information?
	We can identify quite		There are some We can identify
Hypotheses	a few signals that can only be seen when considering multiple articles. See	We can provide a baseline providing reasonable results	features (e.g., how extreme is the source) that will show a predominance of certain  predominance of certain  patterns between certain sources that take contents from others and perform
	Text2Story		framing techniques specific modifications
Requirements	Selection of pairs of articles	Cross-article framing dataset collection/annotation	data collection - source features - detection of framing
Analysis	User study: - cross-article signals	model creation and evaluation	correlations between two sets of features temporal
	-		
Outputs	Cross-article framing signals	A model to identify the signals	Association model between outlets features and framing performed, further indicator of outlet "bias"  Propagation of information model
